

# ARGENTINA POLO

Date:

**To whom it may concern,**

**Ref:**

Hereby we declare and confirm that these saddles are NEW made from NEW tanned leather, with a suede style finish. Inside, the saddle has a kiln dried wooden frame, treated with permethrin as an insecticide and reinforced with Steel. The Wooden frame is covered with a synthetic rubber material. All soft fillings are made of synthetic rubber materials. All hardware used is brass hardware. This is used as saddle for horse (equine)

Bridles and all other leathers are NEW made from NEW tanned leather. This is used for horse (equine)

**Tanned Leather** Manufacturing process used on all these leather products is called Vegetable Tanning that uses tannin. Tannins, a class of polyphenol astringent chemical, bind to the collagen proteins in the hide and coat them causing them to become less water-soluble and resistant to bacterial attack. Hides are stretched on frames and immersed for several weeks in vats of increasing concentrations of tannin.
